

the citizens would undoubtedly do all in their power to find a solution. Every individual and every household would make the necessary changes in lifestyle because all

would know the terrible consequences of inaction.

Similarly, if the problem were confined to one nation, the government and the people of that nation would work together to solve it. Laws would be passed.

Lifestyles would be changed.

Reflections on Climate Change

But the problem of climate change is global and the nations have so far failed to act with the unity required to solve it.

Achieving a degree of material, organizational unity sufficient to combat global climate change will require new institutions and a new way of thinking. The Baha'i writings call for the establishment of an international legislature and a comprehensive code of international law adequate to combat the global problems we now face. In the words of Baha'u'llah: "The Earth is but one country and mankind its

the environmental campaigns of recent years – climate justice. We think of beauty, truth and goodness – spirit and wisdom, if you prefer – are reflected in beings within and between communities, establishing access to the world's goods and services and sharing their benefits. In the light of struggles for justice between cultural, ethnic and religious policies in religious groups, nationally and internationally, we are learning that the same basis for struggles are inherent in the dynamics of human-made climate change. The rich world has produced the carbon and perthe poor world bears the negative consequences with their loss of livelihood and sustainability. To be set free from the ravages of climate change is a cry for justice. The language of justice at the heart of all Christian liberation theologies has entered the environmental lexicon and is binding all of earth's communities in relationships of mutual accountability. Second, interconnectedness. In the withlight of cosmological and evolutionary sciences the Christian doctrine of
