Text

explanatory remarks

a number of five figures at the left side indicates the location of the key word in the basic texts. in the case of the sv, the hb and the vn, the first three figures indicate the page number, and the last two indicate the line number (for example, sv16026=sv 160,26; hb02314=hb 23,14; vn06110=vn 61,10). in the case of the pv and the nb, the second figure indicates the chapter number and the last three figures indicate the karika or sutra number (for example, pv02232=pv, the pramanasiddhi-chapter v.232; nb03015=nb, the pararthanumana-chapter sutra 15. in the case of the sp, the last two figures indicate the karika number (for example, sp00015=sp, v.15).

3. in this database, sentences are artificially divided into word-units, although they involve a phonetic fusion or union in the basic texts. further, compound words are divided into their shortest constitutive elements (we use a hyphen to indicate that hyphenated elements originally form a compound word) with the following exceptions:

3.1. the prefixes a-, dur-, nih- remain undivided, irrespective of attachment to words or compound words.

3.2. suffixes making an adverb, for example -vat, -vasa, are divided. but suffixes making a possessive adjective, for example -vat, -mat, remain undivided, and terms such as a numeral+ -dha/-vidha/-prakara remain also undivided.

3.3. compound words with the suffixes -ta/-tva or -bhava/-bhuta fundamentally remain undivided. for example: karyakaranabhava/-bhuta/-ta.

3.4. compound words with evam-, tat-, tatha-, para-, yatha-, su-, sva- in the wordhead fundamentally remain undivided. for example: evamjatiya, tadutpatti, tathakrta, paratantra, yathartha, yathasvam, sujnanatva, svabhava.

3.5. some compound words which are regarded as terminology remain also undivided. for example: agnihotra, ayogavyavaccheda, arthapatti, padartha, paramartha, prasajyapratishedha, viruddhavyabhicarin, samanantarapratyaya, samtanaparinama, samanyalaksana, svabhavapratibandha.

4. those terms whose wordhead is subject to the sandhi rules (for example, -d dhetu-) are cited in their original form (for example, -d *hetu-) for the sake of using this database to make an kwic index.

1. august. 1997 / tsukuba motoi ono

note: this database is quite a tentative one, and i must admit that there are a lot of errors and defects in this version. i would appreciate it very much if the user would point out any errors in this version so that we can make a better new version in the future.
